

Q

Why do you have to add bottled lemon juice or citric acid when canning tomatoes?

Tweens (10–14)

ANSWER

To make sure the tomatoes are acidic enough to be safe from bacteria

FUN FACT

Tomatoes alone are sometimes not acidic enough to be safely canned!

Q

What is the right amount of bottled lemon juice to add to a pint jar of tomatoes when canning?

Tweens (10–14)

ANSWER

1 tablespoon

FUN FACT

Lemon juice helps keep canned tomatoes safe and yummy!

Q

What happens if you don't follow tested salsa recipes when canning?

Tweens (10–14)

ANSWER

Your salsa might not be safe to eat and could cause sickness

FUN FACT

Safe recipes have been tested in labs to stop harmful germs!

Tweens (10–14)

Q

Why should you never change the amounts of ingredients in a tested salsa recipe?

Tweens (10–14)

ANSWER

Because it can make the salsa unsafe by changing how well it preserves

FUN FACT

Even small changes in ingredients can affect safety when canning salsa.

Q

What is one reason to wear gloves when handling hot peppers for salsa?

Tweens (10–14)

ANSWER

To keep the pepper oils from burning your skin or eyes

FUN FACT

Hot pepper oils can irritate your skin and eyes a lot!

Q

Why is it important to remove air bubbles before sealing jars of canned salsa?

Tweens (10–14)

ANSWER

To help the jars seal safely and keep the salsa fresh

FUN FACT

Air bubbles can cause jars not to seal right and let germs in!

Tweens (10–14)

Q

If you use a boiling water canner, how long should you process jars of salsa at low altitude (0-1,000 ft)?

Tweens (10–14)

ANSWER

15 minutes

FUN FACT

Processing time keeps bacteria from growing inside your salsa jars!

Tweens (10–14)

Q

What should you do immediately after boiling tomatoes to prepare them for canning?

Tweens (10–14)

ANSWER

Dip them in cold water and slip off their skins

FUN FACT

Boiling helps loosen tomato skins so you can peel them easily!

Source: PNW 172 Canning vegetables

Q

Why do canned tomato recipes often say to leave 1/2 inch headspace in the jar?

Tweens (10–14)

ANSWER

So the food can expand safely when heated during processing

FUN FACT

Headspace helps prevent jars from breaking or leaking while canning.

Tweens (10–14)

Q

Which of these is NOT safe to increase in spaghetti sauce recipes when canning?

Tweens (10–14)

ANSWER

Onions or celery

FUN FACT

Too many onions or celery can change acidity and might make the sauce unsafe!

Source: PNW 172 Canning vegetables

Tweens (10–14)

Q

**What type of tomatoes
can you use for canning
salsa or sauces?**

Tweens (10–14)

ANSWER

Any kind, including heirloom or green tomatoes

FUN FACT

All kinds of tomatoes work for canning if prepared safely!

Source: PNW 172 Canning vegetables

Q

Why should you avoid using overripe or frost-damaged tomatoes for canning?

Tweens (10–14)

ANSWER

Because they can make your canned product unsafe or of poor quality

FUN FACT

Bad tomatoes can spoil your whole batch of canned food!

Source: PNW 172 Canning vegetables

Q

What is the safest way to peel hot peppers for salsa recipes?

Tweens (10–14)

ANSWER

Place peppers under a broiler or on a hot burner to blister skins, then peel

FUN FACT

Blistering the skins makes them easy to peel without losing flavor!

Source: PNW 172 Canning vegetables

Q

What is the correct way to prepare salsa before filling jars for canning?

Tweens (10–14)

ANSWER

Heat the salsa to boiling and simmer it as the recipe directs

FUN FACT

Heating salsa helps kill germs before sealing it in jars!

Source: PNW 172 Canning vegetables

Q

Why must you wipe jar rims before placing the lid on?

Tweens (10–14)

ANSWER

To remove food bits that might stop the jar from sealing properly

FUN FACT

Clean jar rims help your lid stick tight and keep canned food safe!

Q

What can you use instead of bottled lemon juice to add acid to canned tomatoes?

Tweens (10–14)

ANSWER

Bottled lime juice

FUN FACT

Key lime juice is not recommended because its acidity is different.

Q

When canning salsa, why should hot peppers be seeded and chopped carefully?

Tweens (10–14)

ANSWER

To control the heat and make it safer to eat

FUN FACT

Removing seeds can reduce some spiciness but keep flavor strong!

Source: PNW 172 Canning vegetables

Q

What is one reason to use a pressure canner instead of a boiling water canner when canning tomatoes with meat?

Tweens (10–14)

ANSWER

Because meat needs higher heat to kill germs safely

FUN FACT

Pressure canners reach higher temperatures to safely preserve low-acid foods like meat.

Source: PNW 172 Canning vegetables

Q

What should you do with jars of canned tomatoes after processing and removing from the canner?

Tweens (10–14)

ANSWER

Let them cool undisturbed for 12 to 24 hours before checking seals

FUN FACT

Cooling lets jars finish sealing properly to keep food safe!

Tweens (10–14)

Q

Why does adding vinegar to some salsa recipes change the flavor?

Tweens (10–14)

ANSWER

Because vinegar adds a sour taste that can be strong

FUN FACT

Vinegar helps preserve salsa but can make it tangier than lemon juice.
