

Tweens (10–14)

Q

Why do we blanch vegetables before freezing them?

Tweens (10–14)

ANSWER

To stop enzyme actions that cause loss of flavor and color

FUN FACT

Blanching helps keep frozen veggies fresh and tasty longer!

Tweens (10–14)

Q

What happens if frozen food gets freezer burn?

Tweens (10–14)

ANSWER

The food becomes dry, tough, and develops off flavors

FUN FACT

Freezer burn dries out food and changes its taste, but it's still safe to eat.

Tweens (10–14)

Q

Which foods do NOT freeze well and can get mushy or lose flavor?

Tweens (10–14)

ANSWER

Lettuce, cucumbers, and cream sauces

FUN FACT

Some foods don't freeze well because their water content changes texture when frozen.

Source: SP 50-766 Foods that do not freeze well

Tweens (10–14)

Q

How long can most frozen fruits and vegetables keep high quality in the freezer?

Tweens (10–14)

ANSWER

8 to 12 months

FUN FACT

Frozen fruits and veggies are best eaten within a year for the best taste and nutrition.

Twens (10–14)

Q

Why do vegetables need to be thawed carefully and not warmed above 40°F before refreezing?

Tweens (10–14)

ANSWER

To avoid harmful bacteria growth

FUN FACT

Bacteria can grow if thawed veggies get too warm, making the food unsafe to eat.

Tweens (10–14)

Q

What happens to water inside food during repeated freezing and thawing cycles in the freezer?

Tweens (10–14)

ANSWER

Water moves to the surface, making large ice crystals and causing dehydration

FUN FACT

Big ice crystals hurt food texture and cause freezer burn over time!

Tweens (10–14)

Q

What happens if you overfill glass jars for freezing food?

Tweens (10–14)

ANSWER

The jar may break because water expands as it freezes

FUN FACT

Water expands when frozen, so jars need space on top to avoid breaking!

Tweens (10–14)

Q

Why should you store root vegetables like carrots and potatoes in high humidity for cold storage?

Tweens (10–14)

ANSWER

To keep them from drying out

FUN FACT

Moist air helps roots stay crisp instead of shriveling up.

Tweens (10–14)

Q

Why must some vegetables be stored apart from others in a root cellar?

Tweens (10–14)

ANSWER

Because some release gases that spoil nearby veggies

FUN FACT

Potatoes release gases that can make apples taste bad-keep them separated!

Source: OSU winter crop storage guide

Q

What is the best way to freeze seafood in smaller portions for easy thawing?

Tweens (10–14)

ANSWER

Wrap each piece tightly and freeze individually in a master bag

FUN FACT

Freezing seafood in small packs lets you thaw only what you need!

Source: PNW 586 Home freezing seafood

Tweens (10–14)

Q

If you freeze food in a container with a lot of empty space, what helps protect the food inside?

Tweens (10–14)

ANSWER

Add fresh water after freezing to top off the container

FUN FACT

Topping off containers with water keeps food from drying and protects it!

Source: PNW 586 Home freezing seafood

Tweens (10–14)

Q

What kitchen tool is best for removing oxygen while packaging food for freezing?

Tweens (10–14)

ANSWER

Vacuum sealing machine

FUN FACT

*Vacuum sealing helps keep air out
and your food tasting fresh!*

Source: PNW 586 Home freezing seafood

Tweens (10–14)

Q

Why is it important to store frozen packages close together in the freezer?

Tweens (10–14)

ANSWER

It helps keep the temperature steady and freezing more efficient

FUN FACT

Keeping packages close saves energy and keeps food evenly frozen.

Tweens (10–14)

Q

If vegetables freeze without blanching first, what can happen to their quality?

Tweens (10–14)

ANSWER

**They may lose flavor, color,
and texture faster**

FUN FACT

*Blanching stops bad changes that
happen in frozen veggies.*
