

PICKLING

Adults

Q

What is the minimum acidity percentage that vinegar must have for safe pickling?

PICKLING

Adults

ANSWER

5% acidity

FUN FACT

Using vinegar with less than 5% acidity can allow harmful bacteria to grow in pickles.

PICKLING

Adults

Q

Why is it important not to reduce the amount of vinegar in a tested pickling recipe?

PICKLING

Adults

ANSWER

Reducing vinegar lowers acidity and risks unsafe preservation

FUN FACT

Vinegar ensures the acidity needed to prevent bacterial growth in pickles.

PICKLING

Adults

Q

During fermentation of sauerkraut, what keeps the cabbage submerged to prevent spoilage?

PICKLING

Adults

ANSWER

A weight pressing the cabbage under the brine

FUN FACT

Keeping vegetables submerged prevents mold growth during fermentation.

Q

What type of container is recommended for fermenting pickles and sauerkraut at home?

PICKLING

Adults

ANSWER

**Food-grade stoneware crock
or glass container**

FUN FACT

*Using non-food-safe containers can
cause contamination or unsafe food
quality.*

PICKLING

Adults

Q

How much pickling salt should you use per quart of water when preparing a brine for fermentation?

PICKLING

Adults

ANSWER

**11/2 tablespoons per quart
water**

FUN FACT

Pickling salt is pure and free of additives that might cloud pickles or cause off-flavors.

Q

How long should cucumber slices be soaked in lime water for firmer pickles as a variation?

PICKLING

Adults

ANSWER

12 to 24 hours

FUN FACT

Soaking in lime water makes the pickles crisp by strengthening their cell walls.

Q

What is the headspace recommended in jars when packing pickled vegetables before processing?

PICKLING

Adults

ANSWER

1/2 inch headspace

FUN FACT

Proper headspace allows for food expansion and vacuum sealing during processing.

PICKLING

Adults

Q

Which metal utensils should NOT be used with pickling due to reaction with acid or salt?

PICKLING

Adults

ANSWER

**Zinc, copper, brass,
galvanized, or iron utensils**

FUN FACT

*Reactive metals can alter pickle color
and make food unsafe.*

PICKLING

Adults

Q

What type of pickles require several weeks of room-temperature curing with bacteria producing lactic acid?

PICKLING

Adults

ANSWER

Brined (fermented) pickles

FUN FACT

Fermented pickles develop complex flavors naturally from bacterial acid.

Q

At altitudes above 6,000 feet, how should processing times for pickles be adjusted in a boiling water canner?

PICKLING

Adults

ANSWER

**Increase the processing time
(e.g., add 10 minutes)**

FUN FACT

Water boils at lower temperatures at high altitudes, requiring longer processing.

PICKLING

Adults

Q

Which of these is the proper procedure to ensure safe pickling when using sugar in sweet pickle recipes?

PICKLING

Adults

ANSWER

Boil sugar with vinegar and spices before adding vegetables

FUN FACT

Heating dissolves sugar and evenly distributes it to preserve flavor and safety.

Q

Why should the blossom end of cucumbers be cut off before pickling?

PICKLING

Adults

ANSWER

It contains enzymes that can cause softening of pickles

FUN FACT

Removing the blossom end helps keep pickles crisp longer.

PICKLING

Adults

Q

What is the role of salt in the brining solution for fermented pickles?

PICKLING

Adults

ANSWER

To inhibit harmful bacteria and promote lactic acid bacteria growth

FUN FACT

Salt balances the environment so beneficial bacteria thrive during fermentation.

Source: NCHFP Pickled eggs

Q

Why is it unsafe to use garbage cans or non-food-grade containers for fermenting pickles?

PICKLING

Adults

ANSWER

They may leach harmful chemicals or have toxic residues

FUN FACT

Only food-safe containers should touch your fermenting foods for safety.

Source: NCHFP Pickled eggs

PICKLING

Adults

Q

What is the recommended method to remove air bubbles from jars during packing pickles?

PICKLING

Adults

ANSWER

Use a non-metallic spatula or plastic knife to gently release bubbles

FUN FACT

Removing air bubbles helps ensure proper vacuum sealing and prevents spoilage.

Source: NCHFP Pickled eggs

Q

For fresh pack pickles, what is the importance of heating the vinegar solution before packing cucumbers?

PICKLING

Adults

ANSWER

It helps dissolve sugar and salt and kills surface bacteria

FUN FACT

Hot vinegar solution is necessary for food safety in quick pickles.

PICKLING

Adults

Q

In fermented vegetables like kimchi, what is the main acid produced during fermentation?

PICKLING

Adults

ANSWER

Lactic acid

FUN FACT

Lactic acid gives fermented vegetables their tangy flavor and preserves them safely.

PICKLING

Adults

Q

Which ingredient is essential for making marinated whole mushrooms safe and shelf-stable through pickling?

PICKLING

Adults

ANSWER

Vinegar with 5% acidity

FUN FACT

Only vinegar at proper acidity ensures marinated vegetables are safely preserved.

Source: NCHFP Pickled eggs

Q

What is the recommended storage time after processing pickles before they develop ideal flavor?

PICKLING

Adults

ANSWER

4 to 5 weeks

FUN FACT

Storage time allows flavors to meld and textures to improve in pickles.

Source: NCHFP Pickled eggs

Q

In pickling, what role does the sugar play besides flavor?

PICKLING

Adults

ANSWER

Balances acidity and improves preservation taste

FUN FACT

Sugar helps soften the sharpness of vinegar for a balanced pickle flavor.
