

MYTH OR FACT?

It is safer to refrigerate vacuum-packaged low-acid foods at home rather than freeze or can them.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Using pasteurized eggs in recipes with raw or lightly cooked eggs safely prevents foodborne illness.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Freezing home-canned foods preserves them safely for long-term storage without any risk.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

You don't need to worry about flour as a food safety risk since it's dry and uncooked.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

You can safely pasteurize raw milk at home by heating it briefly to a lower temperature than store-bought pasteurization.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

The hot pack method is better than the raw pack method for canning fruits because it helps preserve color and shortens processing time.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Adding extra bottled lemon juice or citric acid to fruits like figs before canning is unnecessary and can make the fruit too sour.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Skipping adding lemon juice or other acidifiers when canning low-acid fruits like figs or Asian pears has no impact on safety.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

**You can safely reuse
canning lids as long as
they look new and
undamaged.**

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Filling jars completely to the top with fruit and liquid when canning fruits ensures a better seal and safer product.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Adding bottled lemon juice or vinegar to canned tomatoes is necessary to ensure their safety.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

It's safe to can green tomatoes in salsa recipes designed for red tomatoes without changing the amount of acid or processing time.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

You can safely can your own original salsa recipe by adjusting ingredients to taste without following a tested recipe.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Boiling salsa before filling jars reduces processing time or eliminates the need for proper canning processing.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Adding extra vinegar to a tested salsa recipe makes it safer and can't harm the final product's safety.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Boiling home-canned low acid foods before eating is an extra safety step that helps destroy any botulism toxin present.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Soaking and cooking dried beans before pressure canning them is necessary to ensure safety and quality.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

You can safely can low acid foods like meat and vegetables using a boiling water canner instead of a pressure canner.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Adding a small amount of vinegar to low acid vegetables when canning can make them safe to process in a boiling water canner.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Properly venting a pressure canner for 10 minutes before pressurizing is unnecessary if the canner gets hot quickly.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Fermented pickles require several weeks of curing at room temperature for safety and flavor development.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Quick pickles can be safely made with reduced salt if there is enough vinegar in the recipe.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Adding extra vinegar to a pickling recipe always makes the pickles safer.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Using a garlic clove or onion slice in a pickled egg jar reduces the need for proper acidity or refrigeration.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Salt can be omitted from fermented pickle recipes without affecting food safety.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Adding bottled lemon juice to a jam recipe is necessary to ensure safe acidity and proper setting when using low-acid fruits.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

It's safer to use only pint or smaller jars for jams and jellies because larger jars may not set properly.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Using homemade fruit pectin instead of commercial pectin in jam recipes always produces safe, high-quality jams.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

It is safe to add thickening agents like cornstarch or flour directly to jams before canning to get a thicker product.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

You should never reduce the sugar in a jam recipe because it will always make the product unsafe.

TRUE or FALSE?

MYTH OR FACT?

Properly freezing seafood immediately after catching preserves its best texture and flavor, even if rigor mortis isn't complete.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Storing fruits and vegetables at refrigerator temperatures below 40°F slows spoilage and maintains nutrition for many months in the freezer.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Once frozen, you can safely refreeze any thawed food as long as it looks and smells fine.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

You should always discard canned foods or jars that have frozen, as freezing can make them unsafe.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Cooling large batches of hot food in the refrigerator is unsafe because it raises the fridge temperature and risks spoilage.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Pre-cooking or heating meat to 160°F before or immediately after dehydrating jerky is necessary to make jerky safe for storage and consumption.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Allowing fish to air dry until a sticky pellicle forms before smoking helps smoke to adhere and improves safety.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Dehydrating jerky at any low temperature is safe as long as the meat feels dry and leathery at the end.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Smoking fish at low temperatures below 90°F can preserve fish safely for long periods without refrigeration.

TRUE or FALSE?

Flip the card to bust the myth.

MYTH OR FACT?

Smoking alone preserves meat and fish safely without need for refrigeration or cooking afterward.
